

August 2, 2018

The Honorable Tina Smith United States Senate 309 Hart Senate Office Building Washington, DC 20510

Dear Senator Smith:

The Mental Health Liaison Group (MHLG) – a coalition of national organizations representing consumers, family members, mental health and addiction providers, advocates, payers and other stakeholders committed to strengthening Americans' access to mental health and addiction care - is pleased to support the Mental Health Services for Students Act of 2018, S. 3337.

We applaud your vision of making comprehensive school-based mental health services and supports for students available in communities across America. As you know, supporting mental and behavioral health needs early in life is critical to academic, health, and economic success, and therefore, providing an array of evidence-based services through schools is imperative. The Mental Health Services for Students Act would advance a public health approach to mental health services both in schools and in the community, and has the potential to improve the quality of life for countless children while saving an estimated \$247 billion annually by investing in early intervention programs.

The legislation builds on the highly-effective Safe Schools/Healthy Students program, which strengthens partnerships between local education agencies and community programs including, but not limited to, local primary health, juvenile justice and child welfare entities. It provides funding to place on-site licensed mental health professionals in schools across the country to provide behavioral health services for students and their families at no charge, and it supports community mental health systems to better coordinate with school-based providers, to increase school attendance and improve academic outcomes.

The legislation would also provide assistance to communities in order to create comprehensive, evidence-based, developmentally, linguistically, and culturally appropriate, trauma-informed services that incorporate strategies of positive behavioral interventions and supports in academic settings.

According to the 2009 Institute of Medicine report on mental health prevention and promotion, 50 percent of individuals with a diagnosable mental health disorder will receive a diagnosis by age 14, 75 percent by age of 24, and most will begin experiencing symptoms years before that. And because we know mental health issues are preventable and treatable when children, youth and their families can obtain appropriate and timely services and support, the Mental Health Services for Students Act better connects health and education systems.

The MHLG is confident the legislation will help improve children's resilience and ability to succeed in life. We appreciate your leadership and look forward to working with you and your colleagues to pass this important bill.

Sincerely,
