

Hospice Foundation of America's 2006 teleconference will examine the gap between knowledge and application of effective pain control in the person with a terminal condition, including pharmaceutical, psycho-social, spiritual, and complementary aspects of pain management. Discussions will examine ways in which health care workers and the general public can work together to improve the societal approach to pain management. These subjects and other interesting issues will be brought to the audience by some of the leading researchers and practitioners currently working in pain management.
