

SECOND EDITION

We Can Do Better

Child Abuse and Neglect Deaths in America

INTRODUCTION

September 2010

This is the second edition of “We Can Do Better—Child Abuse Deaths in America.” The first edition was published in 2009. Since then, much work has been done to increase public awareness of child fatalities and to enlist the federal government in elevating the issue.

In October, 2009, the release of the report reached millions of citizens because of extensive press coverage. The release was followed by a ‘Summit to End Child Abuse Deaths in America,’ which brought 150 child abuse experts from around the country to Washington, D.C. for three days of educational sessions and discussions. The Summit attendees made many recommendations for ending child abuse and neglect deaths. They can be found at www.everychildmatters.org.

In January 2010, five national organizations joined forces to address the issue of child abuse fatalities. The partnership, the National Coalition to End Child Abuse Deaths, includes the National Association of Social Workers, the National Children’s Alliance, the National Center for Child Death Review and the National District Attorneys Association, along with the Every Child Matters Education Fund. The coalition will soon announce an ambitious strategy for generating the attention that some 2,500 deaths of children a year at the hands of their family members deserves.

In April 2010, the new coalition conducted an educational briefing on child abuse and neglect for Congressional staff at the Capitol.

In a major development, the Government Accountability Office, in May of 2010, began a study of child abuse fatalities associated with the child welfare system. Members of the coalition have met with GAO staff. The coalition also has met with the commissioner of the federal Administration on Children and Families to voice its concerns and offer its assistance.

Additionally, a petition campaign has been initiated requesting Speaker Nancy Pelosi and Majority Leader Harry Reid to sponsor Congressional hearings on child abuse fatalities.

Much more must be done. The rate of child abuse fatalities continues to rise. The official number for 2008 was 1,740, nearly double the combined number of five other more publicized causes of death, as can be seen in this chart.

Child Abuse and Neglect Fatalities vs. Other Causes of Death

Cause of Death - Most recent data	Total Deaths
U.S. soldiers killed in Iraq and Afghanistan ¹	479
H1N1 pediatric fatalities ²	281
Food borne illnesses ³	74
Toyota accelerator malfunction ⁴	34
Coal mining accidents ⁵	33
Total other causes of death	901
Total child abuse and neglect fatalities⁶	1,740

An overhaul of the nation's child protection system is long overdue. The coalition's goal is to help prompt such an overhaul. You can help. Please visit www.everychildmatters.org/petition and sign this petition urging Congress to take action.

Prologue

This is a report sure to sadden - and perhaps to anger. How could it be otherwise when we look at the innocent faces of children whose lives were cut short by abuse or neglect?

According to official federal statistics, 12,180 children died from child abuse and neglect during the 2001-2008 period examined in this report. Additionally, several studies have concluded there actually is significant undercounting of maltreatment deaths and that the true number may be several thousands more over the those eight years.

Much can be done to reduce these child abuse and neglect deaths. There exists a vast body of knowledge about healthy child growth and development, including how to prevent abuse in the first place, and how to protect children from further harm if abuse should occur. But the sheer amount of child abuse and neglect in America—already more than 20 million reports of maltreatment made to government agencies in this decadeⁱ—is certain evidence that, despite the best efforts of the many who work daily to address this problem, we continue to fall far short in applying our knowledge.

The preventable deaths of at least 12,000 children in an eight-year period demand the attention of policy makers and elected officials at all levels. And while the day to day direct responsibility for the protection of at-risk children rests with thousands of local and state child protection agencies, law enforcement, and courts across the country, their efforts could be greatly strengthened by expanding federal planning, coordination, and funding aimed at reducing child deaths.

President Obama and the 111th Congress already have shown strong interest in child well-being in their early policy and budget decisions. Now they must beef-up federal involvement in addressing what is assuredly a matter of homeland insecurity for thousands of the nation's tiniest citizens. We hope that the sad fate of the children in this report will help spark a national review of the nation's child protection system—and will lead to new federal policies and resources for safeguarding the children who depend on us.

Michael Petit
President, Every Child Matters

Each year our country fails to protect thousands of children in desperate circumstances, circumstances which sadly end only with their deaths.

Here are 51 who met this fate.ⁱⁱ

NOTE: The actual number of child fatalities is unknown, however the numbers reported here were provided

Alabama

6-month-old Phoenix Jordan Cody-Parrish was beaten to death in December 2004.

5-month-old Kaydence Lewinski died in 2007 after being shaken and beaten.

*Deaths 2001-08** 18

Arizona

5-year-old autistic Brandon Williams died in March 2007 from an inflicted fractured skull.

Deaths 2001-08 148

*Alaska did not report fatalities in 2004.

Child Abuse Deaths are Preventable. The President and Congress Must Elevate the Protection of Children to a National Priority if Children Facing Mortal Danger Are To Be Protected

The official number of children killed from abuse or neglect nationwide in 2008 is 1,740. In 2001, the total was 1,300.ⁱⁱⁱ Eighty percent of the children are under four. The current systems of child protection are stretched too thin to protect these children.

Between 2001-2008, the official number of child abuse and neglect fatalities was 12,180.^{iv} The U.S. Department of Health and Human Services has reported an increasing rate of fatalities.^v In thousands of these cases, people reported the danger facing the child to authorities. For a variety of reasons—especially child protective agency budgets and staff capacity stretched dangerously thin in comparison to the problem—the response to these warnings failed the child. Now a harsh economy combined with a steadily weakened safety net in

many states—including unprecedented slashes in child protection spending in some states— threaten to put even more children at risk.

The direct administration of protective services to children at risk of imminent harm properly rests with state and local governments. But with a long history of inadequate funding for child protection and severe

Deaths 2001-08 211

*California did not report fatalities in 2003.

budget crises at the state and local levels threatening public safety, the federal government alone possesses the authority and resources to ensure equal protection to children all across the country.

It remains a little known fact that the federal government already provides nearly half of the funds in the formal child welfare system and much of the statutory framework. The federal government is also legally obligated to evaluate each state's child protection performance and to prescribe recommendations for improvement. But, as presently constructed, neither federal funding nor federal oversights are at levels sufficient to protect all children who require it.

The Actual Number of Child Fatalities Is Unknown but Is Believed to Be Much Higher than Official Statistics

Well-documented research suggests the number of children who die from abuse and neglect is

considerably higher than official government statistics.^{vii} Here's how the federal government defines maltreatment deaths:

“Fatal child abuse may involve repeated abuse over a period of time (e.g., battered child syndrome), or it may involve a single, impulsive incident (e.g., drowning, suffocating, or shaking a baby). In cases of fatal neglect, the child’s death results not from anything the caregiver does, but from a caregiver’s failure to act. The neglect may be chronic (e.g., extended malnourishment) or acute (e.g., an infant who drowns after being left unsupervised in the bathtub).”^{viii}

Using this definition, several peer-reviewed studies conclude that there is a significant undercount of child maltreatment deaths. This is mainly due to what some researchers believe to be the improper classification of many maltreatment deaths as “unintentional injury death,” deaths such as those caused by drowning, fire, suffocation, and poisoning. Upon examination of the circumstances underlying such deaths by

Connecticut

2-year-old Alex Nathan Murphy was shaken to death in November of 2007.

Deaths 2001-08 56

District of Columbia

12-month-old Selena McDonald was beaten to death in January 2004.

Delaware

14-month-old Jaylah Salam died from blunt force trauma in February of 2009.

Deaths 2001-08 6

We Can Do Better

forensic, medical and maltreatment experts—particularly if conducted by multi-disciplinary teams—the percentage of cases re-classified as maltreatment-related may comprise 50% or more of the unintentional injury deaths attributed to other causes on death certificates.^{ix} The vast majority of these re-classified deaths are associated with inadequate supervision of children, often rising to the level of neglect.

If the research is correct about this “under-ascertainment” of maltreatment-related deaths, if it holds roughly true nationwide, then thousands of additional children should be included in the official maltreatment death toll from 2001-2008. What explains the undercount? There are a variety of reasons, including different state definitions of what constitutes a child abuse and neglect death, data collection methodologies, inconsistent record-keeping across the country, and who it is that actually determines the cause of death.

For example, a local child protective services agency

opens a case involving child neglect. But because the mother agrees to treatment, the agency decides to leave the child home.^x However, the mother continues her drug use and one afternoon passes out in her apartment. Meanwhile, her two-year-old child plays unsupervised on a street and is struck by a car. In most states the death is recorded as a pedestrian accident, not the child neglect-related death that the federal definition would suggest it is.

A promising development in determining the amount of maltreatment deaths has been the creation of state child death review teams. In virtually all states there is a team which exists to review child deaths and determine their cause, including deaths from child abuse and neglect. The information resulting from this multi-disciplinary team process provides invaluable data which can shape public health, law enforcement, and child welfare policy and practice. The teams vary in their capacity to conduct their activities. Some are well-funded and give each case the attention required; many don't have the necessary resources. The review teams agree on the need for stronger efforts to

Florida

Deaths 2001-08 34

prevent child abuse and neglect deaths. In the words of one state’s team manager: “For conditions that are 100% preventable, we do a very poor and extremely fragmented job at preventing child maltreatment, as well as protecting those being maltreated.”^{xi}

Reported Child Deaths 2001-2008^{xii}

	Reported
2001	1,300
2002	1,400
2003	1,500
2004	1,490
2005	1,460
2006	1,530
2007	1,760
2008	1,740
Total	12,180

Child Abuse and Neglect Fatalities Flow from Extensive Child Maltreatment in the U.S.

Nearly 20 million annual reports of abuse and neglect have been made to official state child protection agencies in this decade. And while ‘only’ a third or so of these reports were initially substantiated as abuse or neglect, it is often just a matter of time before many of the unsubstantiated cases also reveal themselves to be true as new reports involving the same family continue to be made to the child protection agency.^{xiii} There is no evidence which suggests that intentionally false reports alleging maltreatment are a serious issue. The reality is that child abuse and neglect in our culture are common.

Furthermore, state reporting to the federal government—required by law—remains uneven: since 2001, 27 states did not report child abuse and neglect numbers for at least one of the years in the Department of Health and Human Services annual Child Maltreatment report.^{xiv} Even without complete

Idaho

6-year-old autistic Elizabeth Goodwin drowned in October 2002.

Deaths 2001-08 16

Illinois

13-year-old Shavon Miles was bludgeoned with a 2-by-4 in August 2007.

Deaths 2001-08 564

Indiana

7-year-old Adrian Norris, II was starved to death and set on fire in January 2003.

Deaths 2001-08 388

state data, the official numbers of children reported abused or neglected are staggering. Additionally, incidence studies of abuse and neglect conducted for the federal government suggest that the actual occurrences of maltreatment may be three times greater than the number of reports made to state child protection agencies.

***Reported Child Abuse and Neglect
2001-2008^{xv}***

	Reported
2001	2,659,000
2002	2,600,000
2003	2,900,000
2004	3,000,000
2005	3,300,000
2006	3,300,000
2007	3,200,000
2008	3,300,000
TOTAL	24,259,000

Of the 715,760 children confirmed abused and neglected in 2008:

- 71.1% did not receive proper food, clothing, shelter, hygiene, education, medical care or protection.
- 16.1% were physically abused.
- 9.1% were sexually abused.
- 7.3% suffered from emotional abuse.
- 2.2% suffered from medical neglect.
- 9% suffered from other mistreatment such as abandonment, threats, and congenital drug addiction.^{xvi}
- 60% of people in drug rehabilitation centers report being abused or neglected as a child.^{xvii}

Of the millions of children reported abused or neglected each year, several thousand are in life threatening situations. The present systems of child protection successfully intervene in many of these situations, and further harm to a child is prevented. But for nearly 2,000 children, whatever response may be generated is too little, too late, and children die.

Iowa

8-month-old Antwaun Williams died of head trauma in February 2008.

Deaths 2001-08 **85**

Kansas

9-year-old Brian Edgar died of asphyxiation after being bound with tape in December 2002.

Deaths 2001-08 **52**

Kentucky

10-year-old Michaela Watkins was beaten to death in March of 2007.

Deaths 2001-08 **232**

Child Abuse Fatalities in Rich Democracies (per 100,000 children)

Many More American Children Die from Abuse and Neglect Than Do Children in Other Advanced Countries

Among the rich democracies, the U.S. child abuse death rate is 3 times higher than Canada’s, and 11 times higher than Italy’s.^{xviii}

What accounts for the differences? Among other things, teen pregnancy, violent crime, imprisonment,

and poverty rates are much lower in these countries. Further, their social policies in support of families are much greater and typically include child care, universal health insurance, paid parental leave, visiting nurses, and more—all things which together can prevent child abuse and neglect in the first place.

The U.S. invests only modestly in similar preventive measures compared to the needs of the most vulnerable families. This serious social policy lapse

Louisiana

6-year-old twins Samuel and Solomon Simms were strangled to death in 2007.

Deaths 2001-08 246

Maine

5-year-old Logan Marr died of asphyxiation after being bound with duct tape in January 2001.

Maryland

11-year-old Irvin Harris was stabbed to death in July 2006.

*Deaths 2001-05** 143

*Maryland did not report fatalities in 2006-2008.

We Can Do Better

creates an environment where child abuse and neglect are common—and preventable maltreatment fatalities are inevitable.

It Is Largely an Accident of Geography Whether Abused or Neglected Children Receive the Full Protection They Need

As hard as they may try, no states are in full compliance with federal child welfare standards.^{xix} No matter, state child protection reform efforts, often stemming from federal reviews and evaluations, have fueled many positive changes in state child protection practices in recent years.

But the combination of millions of children in harm's way and inadequate resources leaves many states stretched too thin to protect all children who need it. Accordingly, it is unlikely that states will come into compliance with all federal standards anytime soon, especially in view of severe state budget woes. But some states do protect children better than others. For

example, in 2008 the child abuse and neglect fatality rate, in the states where there was a fatality, was 10 times greater in the bottom state than in the top state.^{xx} And some states are willing to spend much more to protect children—as much as 12 times more per capita.^{xxi}

Although a clear correlation has not been established on how much states spend on child protective services and their child abuse and neglect death rates, states which do allocate more funds are more likely to investigate all abuse and neglect reports, not just some, because social workers have more manageable workloads. They also are more likely to retain staff; invest heavily in training; provide timely mental health, substance abuse treatment, and other victim services; and to prosecute serious abusers. Some states have much less capacity to conduct such activities, and state budget problems are weakening already under-funded systems of child protection. Such huge variations in capability among the states and their thousands of child protection offices across the country can translate directly into whether children live or die.

Massachusetts

4-year-old Rebecca Riley died from an overdose of three medications in December 2006.

*Deaths 2001-05** 70

Michigan

5-year-old Rose Kelley died from liver disease likely brought on by malnutrition and overuse of acetaminophen in June 2006.

Minnesota

4-year-old Demond Reed was beaten, resulting in a trauma induced seizure. He died in February 2008.

Deaths 2001-08 119

Many Child Protection Workers Frequently Lack the Resources and Training They Need

Child protection work is labor intensive, difficult, and emotionally stressful. The consequences of the decisions that child protection workers must make can be enormous: leave a child in harm’s way, for example, or exercise powerful state authority that can result in the termination of parental rights. When trained and experienced staffs have access to experienced supervisors and to timely services such as mental health, substance abuse treatment, police back-up, and emergency shelter, children are much more likely to be protected, and abusive parents are much more likely to learn how to care for their children safely.

Recruiting and retaining highly trained social workers is a must. A major factor in retention is workload size. Children inevitably fall through the cracks when child protection workers have unmanageable workloads, leaving workers frustrated. Caseload ratios in some jurisdictions are as high as 60 or more,^{xxii} even

while national standards recommend 12 or fewer cases per worker. Another factor in recruitment is compensation. Starting salaries under \$30,000 for child protection workers are not uncommon, and rarely do they rise above \$50,000—modest sums in view of the important jobs they are asked to do.^{xxiii}

Further, while child protection workers are the most prominent “first responders” to child abuse and neglect, there are many others on the front lines who also may be involved, including education, law enforcement, and health professionals. Often, these groups lack training and support for fulfilling their own obligations to report abuse and neglect and to protect children.

There is virtually no press coverage of the federal government’s role in the prevention of child abuse.

To protect children at high risk of life-threatening abuse and neglect,

Mississippi

14-month-old Tykiriah McClendon was killed by blunt force trauma in October of 2008.

Deaths 2001-08 98

Missouri

2-year-old Alyssa Eickmeier died from a skull fracture after being thrown in October 2006.

Montana

2-year-old James Many White Horses was beaten to death and put in the trunk of a car in May 2008.

Deaths 2001-08 18

the official child protective services agencies and law enforcement must collaborate. Child protective workers are best able to focus on the needs of the child, and law enforcement personnel are essential when confronting serious abusers. Written protocols and joint training between child protective services and law enforcement are essential for protecting children. Such collaborative efforts are much better developed in some jurisdictions than others, including those served by children's advocacy centers.

Restrictive Confidentiality Laws Shield the Press, Elected Officials and the Public from Shortcomings in the Child Protection System

Originally intended to protect living child victims from publicity, confidentiality laws have become a hindrance to a better public understanding of child abuse and neglect fatalities.^{xxiv} Sometimes used to shield the public from the details of a child's death, confidentiality laws also interfere with journalists

gathering and reporting facts about the incident. Even lawmakers are sometimes denied access to information surrounding an individual case, information that is critical to strengthening the child protection system. The withholding of such information benefits no one. Stories about child abuse and neglect deaths are often reported in local papers, especially if a child's situation was brought to the attention of authorities. Frequently, however, these reports reveal little about how the formal child protection system performed in a fatality case. Instead they may focus on the seeming inadequacy of the child protective worker in the case, and often they prompt a call for both the worker and agency administrator to be fired. This response does little to address the underlying systemic problem.

The national press generally limits its maltreatment coverage to the most sensational child deaths. It provides virtually no press coverage of the federal government's role in the prevention of child abuse and neglect fatalities. And it is rare to see members of Congress or senior Administration officials speaking to the issue.

Nebraska

20-month-old Nathaniel Saunsoci-Mitchell died of brain injuries and other abuse caused in September 2006.

Deaths 2001-08 **14**

Stopping Child Abuse and Neglect Fatalities Requires Fighting Child Poverty

While strengthening the formal child protective services system has the highest immediate promise for safeguarding children in dangerous situations, there are millions of children in marginal homes who are at daily risk of harm. Reducing this risk will reduce fatalities—and the need for protection in the first place. Reducing risk also poses an enormous economic challenge because, while child abuse occurs in all socioeconomic ranks, it lands hardest on children in the poorest families. In fact, poverty is the single best predictor of child abuse and neglect, and no wonder in view of the family stress often accompanying poverty. One study found that a child living in a family with an annual income of \$15,000 or less was 22 times more likely to be abused than one in a family with an income of \$30,000 or more.^{xxv}

More than one in five American children, over 14 million, still live in poverty.^{xxvi} Conditions that are still widespread in the U.S., i.e., teen parenthood, violence,

mental illness, substance abuse, imprisonment, unemployment, low education, and poor housing, are all disproportionately associated with poverty and often wreak havoc on poor families and children.

Most fatality victims are very young and very poor. In 2008, 80% were under age four, and almost half were under age

one. As noted in the federal Department of Health and Human Services' report *Child Abuse and Neglect Fatalities: Statistics and Interventions*, "these children are the most vulnerable for many reasons, including their dependency, small size, and inability to defend themselves." Further, 80% of the fatalities involved a parent as perpetrator. And often the abuser is a poor "...young adult...without a high school diploma... depressed... [who] has experienced violence first hand."^{xxvii}

...the likelihood of a child not being protected and dying from abuse is much greater in some states than others...

New Jersey

5-month-old Brianna Lopez was raped and thrown, and she died in July 2002.

Deaths 2001-08 72

New York

7-year-old Nixzmary Brown died from torture and starvation in January of 2006.

Deaths 2001-08 630

We Can Do Better

We know a great deal about preventing abuse and neglect and stopping related fatalities. When provided with support services and appropriate supervision, the vast majority of potentially abusive and neglectful parents can learn to safely care for their children. And many abused children who get help are resilient enough to overcome their history. But for many, the outcome is predictable: when childhood goes wrong, adulthood goes wrong, and the sad story of abuse, including death, repeats itself from one generation of troubled families to the next.

Children at Grave Risk of Being Killed Require Protection from Their Government

We need a national approach for protecting children because of the heavy toll exacted from the nation caused by child abuse and neglect—thousands killed, millions of lives ruined, costs of more than \$100 billion a year.

While it is too late to help the children shown in this report, we can honor their memories by vowing to protect every child in danger.

Yet even with broad public support for protecting every child from harm, the nation's present commitment of resources, laws, and policies is too little.

We can overcome inadequate funding for child protective services and wide variations in capacity among states only by enacting federal policy committed to protecting children no matter where they live.

Call to Action: Stop Child Abuse and Neglect Deaths

- Building upon the best of current child protection systems, the government should develop a strategy for stopping maltreatment deaths. It should include public

caseloads and better training, and to provide a wide array of public health and social services to help at risk families.

- In consideration of expanded federal spending, states should be required to adopt national standards, drawn from existing best practices and policy, for protecting children.
- Congress should modify confidentiality laws to allow policy makers, the press, and the public to understand better what protection policies and practices need to be improved in the aftermath of a child's death.
- The Department of Health and Human Services should standardize definitions and methodologies used to collect data related to maltreatment deaths and

should require states to provide such data in order to receive federal funds. Further, state child death review teams should be adequately funded.

- The Department of Health and Human Services, in cooperation with state child protective and public health agencies, should conduct a public education campaign to encourage reporting of child abuse and neglect, and to enlist communities in the protection of children.
- To better protect children at imminent risk of severe harm, the federal government, led by the Departments of Justice and Health and Human Services, and in cooperation with states, should adopt a model protocol for assuring that civil and criminal legal proceedings are closely coordinated between child protection and law enforcement agencies.

ⁱⁱ All of these children died at the hands of family members or other caretakers to whom they were entrusted. Because of the possibility that criminal prosecution continues in some of these cases, we have chosen to omit the identification of the perpetrators, alleged or convicted. Additional information may be available upon request.

^x Child Protective Services—CPS—is the name given to those government agencies officially charged with investigating child abuse and neglect reports. Each state has a CPS agency and each state CPS agency has many field offices, sometimes one in every county. Child protection services usually are provided by state workers, but in some states the services are provided by county employees under state supervision. Many agencies, often private and non-profit, provide prevention services to families at risk of abusive behavior, or to families as part of a treatment plan. When children cannot safely remain with their families they are placed in foster care. Many children return to their families without further incidence. Those that cannot return may remain in foster care until age 18, or may be adopted. All of these options and interventions comprise a state's child welfare system
