The Honorable Donald Beyer  
1226 Longworth House Office Building  
Washington, D.C. 20515

The Honorable Brian Fitzpatrick  
271 Cannon House Office Building  
Washington, D.C. 20515

Dear Representative Beyer and Representative Fitzpatrick:

On behalf of the Mental Health Liaison Group (MHLG), a coalition of national organizations representing individuals and families experiencing mental health and substance use challenges, mental health and substance use treatment providers, advocates, and other stakeholders, we write in strong support of the *Barriers to Suicide Act of 2025* (H.R.3505). We applaud your commitment to stopping suicide, and are proud to endorse your legislation to aid state, local and Tribal governments in providing evidence-based, life-saving nets and barriers on bridges and other high-risk structures.

In 2023, 49,316 individuals died by suicide in the United States. Of these lives tragically lost to suicide, 1,297 died by falling from bridges and other high places.<sup>1</sup> While this is a troubling trend, suicide can be prevented through effective intervention and prevention methods. For bridges and other publicly accessible areas of significant height, installing barriers and nets can act as a delay or deterrent to an individual at risk, providing more time to get through the intense, often brief, moment of crisis.

The moments leading up to a suicide attempt are the most critical, and are ripe for intervention and prevention. Removing or limiting access to lethal means in the moments before a suicide attempt can deter the crisis and provide valuable time for the individual to receive support and bypass acting on a suicidal impulse. According to the Lifeline Steering Committee, established by the National Suicide Prevention Lifeline (now the 988 Suicide & Crisis Lifeline), the most effective way to prevent suicide-by-jumping from bridges is by implementing bridge barriers.<sup>2</sup>

The *Barriers to Suicide Act* would help communities across the country install barriers and nets on bridges, buildings, parking garages, highway-rail grade crossings, and rail stations. The competitive grant program established by this legislation will help to address the ongoing suicide crisis in this country by allowing states and localities to apply for federal funding to support the installation of suicide deterrents. Priority will be given to projects located in an area with a high rate of suicide or other priority characteristics determined by the Secretary of Transportation.

Importantly, the bill also establishes a study by the Government Accountability Office to explore other deterrents that are effective on these structures, as well as which structures besides bridges tend to attract high number of deaths-by-suicide. This study will help inform the most effective means of

preventing suicides on bridges and other high structures, helping to save lives and giving us more options for future methods of reducing access to these lethal means during a moment of suicidal crisis.

Thank you again for your leadership on this important legislation. We look forward to working with you and your staff to enact this bill this Congress.

Sincerely,

Active Minds
